

TQL IS A PROUD PARTNER OF THE RESPONSIBLE CARE® PROGRAM

Responsible Care is a voluntary initiative developed by the American Chemistry Council focusing on improvement of health, safety and environmental performance in the chemical industry.

We're one of approximately 100 companies in the US that are Responsible Care certified and was recently named **Responsible Care Partner of the Year 2018, 2020, and 2021**. We go above-and-beyond to provide customers that move chemical and hazmat loads with:

SERVICE.

We provide all customers with a dedicated, single-point of contact. For chemical and hazmat customers and shipments, our Logistics Account Executives are required to complete additional training, so you can be sure we're providing the best service possible.

TQL can arrange the movement of chemicals and most hazmat through truckload and LTL and offer additional solutions available via rail.

PEACE OF MIND.

Our trained Logistics Account Executives are backed by a specialized Distressed Load Assistance team that helps to resolve incidents that may occur at pick-up, over the road or at delivery.

CONTINUAL IMPROVEMENT.

We regularly evaluate and enhance our Sustainability efforts and initiatives, our Business Continuity Plan and our Chemical and Hazmat Transport policies, and trainings that benefits your supply chain, so you will receive the best chemical and hazmat shipment care.
